

## PRVI REGIONALNI PARK U HRVATSKOJ

Vlada Republike Hrvatske je u veljači 2011. godine donijela Uredbu o proglašenju Regionalnog parka Mura-Drava, te time proglašila trajnu zaštitu područja uz tok rijeke Mure i Drave. Tako je ujedno i osnovan prvi regionalni park u Hrvatskoj koji se proteže kroz pet hrvatskih županija (Medimursku, Varaždinsku, Koprivničko-križevačku, Virovitičko-podravsku i Osječko-baranjsku), a ukupno pokriva 87 680,52 ha površine.

Zaštitom je obuhvaćen jedan od posljednjih doprirodnih riječnih sustava u srednjoj Europi, koji s obzirom na geološku i biološku raznolikost, krajolaze, te kulturno-tradiciju baština predstavlja izuzetnu vrijednost na regionalnom, nacionalnom i europskom nivou. Proglašenje regionalnog parka ujedno je i važan korak u smjeru uspostave UNESCO-vog MAB rezervata biosfere Dunav-Drava-Mura.

Zaštitu prostora u kategoriji regionalnog parka neće ugroziti provođenje gospodarskih aktivnosti na ovom prostoru. Putem uvjeta zaštite prirode osigurava se njihovo provođenje na način koji neće ugrozavati prirodne vrijednosti zbog kojih je prostor i zaštićen. Istovremeno, regionalni park otvara nove perspektive održivog razvoja, vezane uz ekološku poljoprivredu i ekoturizam.

Upravljanje regionalnim parkom obavlja se putem koordinacije postojećih županijskih javnih ustanova za upravljanje zaštićenim prirodnim vrijednostima.

### FIRST REGIONAL PARK IN CROATIA

In February 2011, The Croatian government adopted the Regulation on the Designation of the Mura-Drava Regional Park; thus, declaring a designated protected area along the Mura and Drava rivers. This is the first such regional park in Croatia, which extends through five Croatian counties (Medimurje County, Varazdin County, Virovitica-Podravina County, Osijek-Baranja County) and covers a total area of 87.680,52 ha.

The protection extends over one of the last natural river systems in Central Europe, which is considered exceptionally important due to the geological and biological diversity, landscapes and tradition and cultural value that it holds at the regional, national and European level. The announcement of the park is also an important step in establishing the UNESCO Biosphere Reserve (MAB) Danube-Drava-Mura.

Protection of the areas in the regional park will not jeopardize economic activities in the area. In fact, protection of the natural areas in the park's space ensures that activities will be implemented in a way that will not harm the environment. At the same time, the regional park opens new perspectives for sustainable development, especially in the fields of organic agriculture and ecotourism.

Management of the regional park is coordinated by existing County Public Institution for the Management of Protected Natural Values.

## PRIRODNE VRIJEDNOSTI REGIONALNOG PARKA NATURAL VALUES OF THE REGIONAL PARK

### FLORA / FLORA

Na području regionalnog parka zabilježene su brojne svoje vaskularne flore, od kojih su mnoge strogo zaštićene. Značaj ovom području daje glacijalni relikt kebrač (*Myricaria germanica*), koji je kritično ugrožen u Hrvatskoj.

In the regional park, numerous species of vascular plants have been recorded, many of which are strictly protected. The importance of this area gives the glacial relict German Tamarisk (*Myricaria germanica*), which is critically endangered in Croatia.

Kebarač / German Tamarisk  
(*Myricaria germanica*)

Gnijezda bregunica / Nest site of Sand Martin  
(*Riparia riparia*)

### STANIŠTA / HABITATS

Unutar regionalnog parka posebno su značajna vlažna staništa, koja su rijetkost na europskoj razini: poplavne šume, vlažni travnjaci, mrtvi rukavci, napuštena korita, meandri, strme obale i sprudovi.

Within the regional park, there are especially important wetland habitats that are rare on the European level, which include flooded forests flats, wet meadows, still backwaters, abandoned channels, meanders, and steep banks.

### ŠUME / FOREST

Prevladavajuću autohtonu vegetaciju područja uz rijeku Dravu čine nizinske poplavne šume, čije je formiranje i razvoj ujedno uvelato stalnim prisutvom većih količina vode u tlu. Većinom su prisutne hidrofilne vrste poput vrba (*Salix sp.*), topola (*Populus sp.*), hrasta lužnjaka (*Quercus robur*), običnog graba (*Carpinus betulus*), veza (*Ulmus laevis*) i druge.

The dominant indigenous vegetation of areas along the Drava River constitutes lowland riparian forests, whose formation and development are conditional on the permanent presence of large quantities of water in the soil. Species such as willows (*Salix sp.*), poplars (*Populus sp.*), English oak (*Quercus robur*), common hornbeam (*Carpinus betulus*), European White Elm (*Ulmus laevis*), and others are present in the area.

### PTICE / BIRDS

Mnoge su vrste ptica ovisne upravo o riječnoj dinamici i poplavnim šumskim područjima uz rijeku. Šire područje uz Dravu je područje rasprostranjenosti velikog broja ugroženih i zaštićenih vrsta ptica.

Many bird species depend precisely on the river dynamics and floodplain forests along the river areas. The wider area along the Drava River has a large number of threatened and endangered species of birds.

Vodomar / River Kingfisher  
(*Alcedo atthis*)

Crna roda / Black Stork  
(*Ciconia nigra*)

Vidra / European River Otter (*Lutra lutra*)

Dabar / European Beaver (*Castor fiber*)

### SISAVCI / MAMMALS

Na području uz Dravu obitava vidra (*Lutra lutra*), strogo zaštićena vrsta, a značaj ovom području daje i dabar (*Castor fiber*), vrsta koja se nakon nestanka i ponovne reintrodukcije uspešno udomačila.

In the area, there is the European River Otter (*Lutra lutra*), a strictly protected species. As well, the habitat is important for European Beaver (*Castor fiber*), which is a species that went extinct and then was successfully reintroduced.

Mača čigra / Little Tern  
(*Sternula albifrons*)

### RIBE / FISH

Rijeka Drava po broju vrsta predstavlja rijeku s najraznolikijom ribljom zajednicom u Hrvatskoj. U njoj je do sada zabilježeno 70-ak vrsta.

The Drava River has a large number of fish species. So far, over 70 species have been recorded.

### VODOZEMCI I GMAZOVI

#### AMPHIBIANS AND REPTILES

Potencijalno su ugrožene vrste obalnih vlažnih i vodenih staništa koje su pronađene uz Dravu: barska kornjača (*Emys orbicularis*), gatalinka (*Hyla arborea*), crveni mukač (*Bombina bombina*) i druge.

Potentially endangered species of wetland and aquatic habitats that are found along the Drava: European Pond Turtle (*Emys orbicularis*), European Tree Frog (*Hyla arborea*), European Fire-bellied Toad (*Bombina bombina*) and others.

10

## UZ AKUMULACIJU HE DUBRAVA

Jedan od rijetkih – ostao je sačuvan nekadašnji rukavac Drave.

## BESIDE ACCUMULATION LAKE HE DUBRAVA

One of the few preserved former armband of the Drava River.

## DRAVSKA PARK-ŠUMA U VARAŽDINU

THE DRAVA PARK FOREST IN VARAŽDIN  
The lower parts of accumulations provide facilities for many species.

## ORMOŠKO JEZERO

Populacija brojnih vrsta ptica koje gnijezde i prezimljaju na ovom području dosegla i međunarodni značaj.

## ORMOŽ LAKE

Large numbers of many bird species nest and winter in this area, which makes it an area of international importance.

## THE DRAVA RIVER BETWEEN THE ORMOŽ AND VARAŽDIN LAKES

Portions of the old river bed are still characterized by a huge diversity of landscapes, habitats and species.

## PERIVOJ UZ DVORAC KRIŽOVLJAN-GRAD CASTLE

Within the Križovljani grad Castle's grounds, there is an English style park, which was built using the natural indigenous forests along the Drava River. The whole area is protected as a monument of park architecture.

## DRAVSKA IZMEĐU ORMOŠKOG JEZERA I VARAŽDINSKOG JEZERA

Dionice starog korita rijeke još uvijek obilježava velika raznolikost krajobraza, staništa i vrsta.

## THE DRAVA RIVER BETWEEN THE ORMOŽ AND VARAŽDIN LAKES

Portions of the old river bed are still characterized by a huge diversity of landscapes, habitats and species.

## ORMOŽ

Large numbers of many bird species nest and winter in this area, which makes it an area of international importance.

## VARAŽDIN

Between the old course of the Drava River and the derivative channels, there are isolated "islands" remaining, which serve as physical crossing points across the channel.

## DERIVACIJSKI KANAL HE VARAŽDIN

Između starog toka Drave i derivacijskih kanala ostali su izolirani „otoci“, prostorno oslonjeni na punktove prelaza preko kanala.

## DERIVATIVE CANAL HE VARAŽDIN

Between the old course of the Drava River and the derivative channels, there are isolated "islands" remaining, which serve as physical crossing points across the channel.

## BOTANIČKI SPOMENIK PRIRODE

Raritetni primjerici 70-ak stabala bijele topole (*Populus alba*) starosti od preko 100-tinjak godina.

## THE BOTANICAL NATURAL MONUMENT

Rare examples of about 70 white poplar trees (*Populus alba*) that are about 100 years old or more.

## GRADSKA SPORTSKA DVORANA VARAŽDIN

Sport, recreation and events

## CITY OF VARAŽDIN SPORTS HALL

Sport, recreation and events

## PERIVOJ UZ DVORAC KRIŽOVLJAN-GRAD CASTLE

Uz dvorac Križovljani grad nalazi se perivoj engleskog tipa, na koji se nadovezuje prirodna autoktona šuma uz dravski rukavac. Cjelina je zaštićena kao spomenik parkovne arhitekture.

## THE PARK OF THE KRIŽOVLJAN-GRAD CASTLE

Within the Križovljani grad Castle's grounds, there is an English style park, which was built using the natural indigenous forests along the Drava River. The whole area is protected as a monument of park architecture.
